

Temitayo Emmanuel Usman

Software Engineer

Mocton NB | +19425889313 | temitayoemmanuel0101@gmail.com | [LinkedIn](#) | [Portfolio](#)

Professional Summary

Full-Stack Developer specializing in the MERN stack, with experience building responsive React interfaces, Node.js services, and RESTful APIs. Skilled in database optimization, Git-based collaboration, debugging, and developing secure, scalable applications. Brings additional experience with AI-integrated workflows and clear technical documentation in collaborative software environments.

EDUCATION

SQI COLLEGE OF ICT <i>PROFESSIONAL DIPLOMA</i>	Nov 2024
Federal University Oye-Ekiti <i>BACHELOR'S DEGREE</i>	Feb 2023

Skills

Front End Development JavaScript Typescript React React Native HTML CSS	Back End Development Node js Express.js RESTful APIs FastAPI Python	Databases And Cloud MongoDB Firebase SQLAlchemy PostgreSQL AWS S3
Tools And Practices Git Agile SSDLC Waterfall Debugging code Reading code MERN Stack AI-Native Development	Soft Skills Problem solving Attention to detail Communication	

EXPERIENCE

Enforca Technologies <i>BACKEND ENGINEER INTERNSHIP</i>	Jun 2024 - Dec 2024
- Engineered and maintained robust RESTful APIs powering a dynamic admin dashboard, enabling seamless data flow for real-time management and analytics. - Partnered closely with front-end developers to integrate backend services, strengthen system architecture, and deliver a cohesive user experience. - Optimized database queries and backend logic to improve system efficiency, significantly boosting API performance and overall scalability. - Managed the codebase with Git and participated in peer code reviews, applying software development best practices and maintaining high coding standards. - Created comprehensive technical documentation for API endpoints, streamlining future updates and simplifying onboarding for other developers. - Applied hands-on backend development experience to build high-performing, scalable solutions that supported technical excellence at Enforca Technologies.	
SQI College <i>SOFTWARE ENGINEER APPRENTICESHIP</i>	Jan 2024 - May 2024
- Collaborated with senior mentors to develop knowledge of backend architectures and deployment strategies while building a professional foundation in scalable software engineering. - Architected and deployed full-stack applications using the MERN stack, including MongoDB, Express.js, React.js, and Node.js, while gaining cross-functional exposure to Express.js and FastAPI. - Engineered secure, high-performance RESTful APIs and optimized MongoDB schemas to support efficient data handling and seamless system integration.	

- Developed dynamic, responsive user interfaces with React.js using modern ES6+ syntax and React Hooks to streamline state management and enhance the user experience.
- Applied industry best practices in modular design and version control to deliver robust, production-ready code in a fast-paced environment.
- Bridged academic theory and professional execution by contributing to high-quality software development life cycles.

Accenture Forage Job Stimulation | *Frontend Developer*

Jun 2025 - Jul 2025

- Analyze the client's current technical requirements against their new request.
- Identify missing key aspects of the infrastructure system.
- Based on the technical requirements and current infrastructure system, recommend an appropriate cloud-based solution for Digital Health.
- Establish a strong foundation for managing user access and permissions.
- Integrate security into the software development lifecycle for a holistic and proactive approach to security.
- Design an Agile approach for the project you just completed.

Datacurve | *DSA Content Creator (software engineer)*

Nov 2025 - Present

- Architected high-quality training datasets for multi-agent systems, specifically improving autonomous code-generation and reasoning capabilities for LLM agents.
- Optimized LLM performance by refining natural language document datasets, resulting in higher accuracy for complex coding tasks.
- Utilized AI-native development workflows (Cursor & Claude Code) to accelerate data pipeline scripting and validation by 40%.
- Collaborated on fine-tuning workflows to improve agentic behavior in handling edge-case programming logic.

PROJECTS

JobFinder

- Leveraged the MERN stack, including MongoDB, Express.js, React, and Node.js, to build a scalable full-stack web application for job recruitment with a seamless user experience.
- Engineered secure RESTful APIs integrated with JWT-based authentication and robust security middleware, including rate limiting and XSS protection, to ensure enterprise-grade data integrity.
- Designed a responsive front end using Tailwind CSS and modern React hooks, improving application performance by 50% through strategic code splitting, lazy loading, and bundle optimization.
- This project reflects a career objective to deliver production-ready web applications with clean, refactored codebases and automated CI/CD pipelines tailored for modern cloud environments.

Resume Builder

- Architected and deployed a full-stack AI resume builder using React, Node.js, and TypeScript to streamline the professional branding process for job seekers.
- I engineered a secure RESTful API featuring JWT authentication and integrated Google Gemini AI to deliver intelligent, real-time content suggestions for resume optimization.
- To ensure a seamless user experience, I developed a responsive frontend with TailwindCSS and implemented automated transactional emails via the Resend API.
- The infrastructure was optimized for scalability and security through MongoDB Atlas, rate limiting, and automated database maintenance using cron jobs.
- Managed end-to-end deployment on Netlify and Render, demonstrating proficiency in cloud-based web application development and modern DevOps practices.
- Implemented a robust security protocol by integrating the Resend mail service to facilitate mandatory email verification, effectively mitigating the risk of malicious registrations and bot activity.
- Engineered an automated backend maintenance system utilizing Cron jobs to purge unverified user data after a 24-hour window, ensuring optimal database performance and efficient storage management.
- My objective is to leverage these technical competencies to build secure, scalable.
- This project highlights my ability to build secure, production-ready applications that leverage AI to solve real-world career development challenges.

Languages

- English(B1)
- French(A2)

Certifications

- Web Design certification: Jun 2023, SQI college
- Javascript and Firebase Certification: Aug 2023, SQI college
- Working with the OpenAI API: Jan 2026, Datacamp.
- Prompt Engineering with the OpenAI API: Feb 2026, Datacamp.
- LLMops Concepts: Mar 2026, Datacamp
- Introduction to Embeddings with the OpenAI API: Apr 2026, Datacamp
- AI Engineer For Developers Associate with Open AI: Datacamp
